This book, however, starts with real problems and their patients, then turns to specialist clinicians from different philosophies to describe how they approach the same patient. This makes it easier for the reader to understand the various approaches and hence to provide a worked out number of references to support their choice of treatment. The book will be of interest to a wide variety of readers, from physiotherapists, nurses and occupational therapists to those with neurological conditions and managers organising these services. It will also be valuable for both undergraduate and postgraduate therapists studying neurology.
